Exploring Canadian geography

Grade 9 · Answer Sheet B

Name: _____

Date: _____

Part 1

1. **a) Oil** — Which of these is a non-renewable resource?
2. **a) Two out of three** — About how many Canadians live within 100 km of the US border?
3. **a) Mount Logan, in Yukon** — What is Canada's highest mountain?
4. **c) The United States** — Which country buys most of Canada's exports?
5. **b) Land north of the tree line, with low plants and no trees** — What is the tundra?
6. **a) How many people live in each square kilometre** — What does population density measure?

Part 2

3 — The Trans-Canada Highway opens (1962)

5 — Canada's worst wildfire season on record (2023)

2 — Alberta and Saskatchewan become provinces (1905)

4 — The northern cod fishery is closed (1992)

1 — Confederation: four provinces form Canada (1867)

Part 3

The northern cod fishery collapsed in 1992. What lesson does it teach about managing renewable resources?

A good answer mentions: A renewable resource only renews if it is used more slowly than it grows back; set catch limits on science and lower them early; listen to warnings from scientists and from people who know the resource (local fishers, Indigenous knowledge); protect young fish and breeding areas; plan other jobs for communities that depend on one resource.
